DETAILED ACTION

Allowable Subject Matter

1. Claims 3 – 7, 9, 11, 12 are allowed. Newly added claims 11 and 12 are interpreted as being identical in scope to claims 3 and 9 indicated as allowable in previous office action.

2. The following is an examiner's statement of reasons for allowance:

Applicant's control section requires inputs as follows: energy input from finger processors, delay profile from searcher section, current reception quality from signal processor downstream from RAKE combiner, and quality of service required for user as stored as a system parameter. Applicant's control processes this information to configure searchers in wide and/or narrow modes of operation on basis if inputs. Popovic ('397) shows a timing control unit, but does not disclose an input from RAKE demodulator as required by applicant, or a downstream signal processor providing an input to timing control unit. Takagi et al(US-6,188,682) discloses a downstream processor from RAKE demodulator but does not show a feedback path to search controller (figure 2), and does not disclose operation as claimed by applicant. Shou et al (US-5,910,948) discloses aspects of applicant's invention but lacks downstream processor from RAKE demodulator and does not clearly show a control section. Cox et al (US-6,693,953) discloses a wireless receiver with a signal processing unit with similar functionality to applicant's invention, but does not disclose control of cell searcher with multiple modes of operation.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2637

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
